

Dataset of two environments: **env A** and **env B**

Forward-pass (architecture)

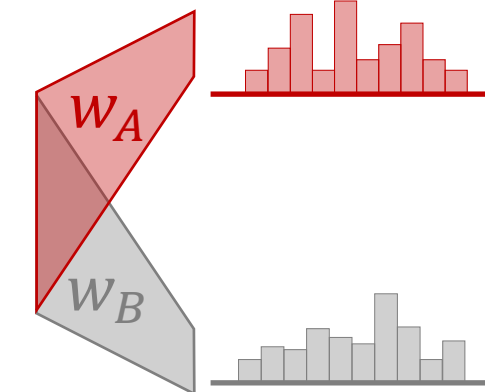

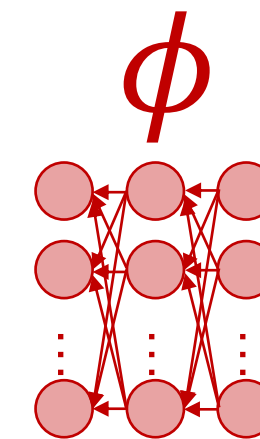

Alternate batch
updates between

Training schedule

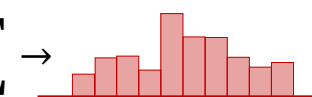

env A

env B

Batch
env A

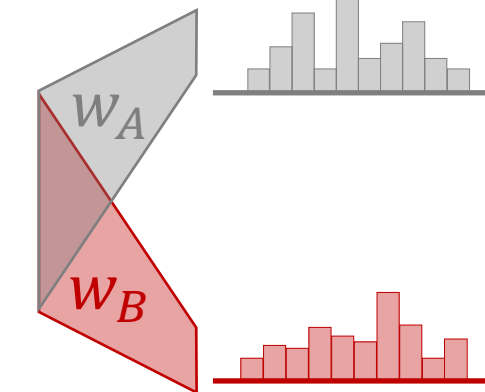

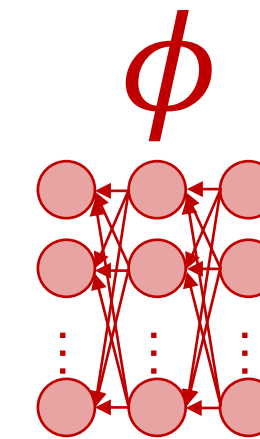

$\frac{1}{2} \sum$

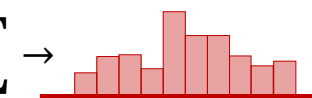

$\leftarrow \mathcal{Loss}$

Backpropagate only through W_A and ϕ

Batch
env B

$\frac{1}{2} \sum$

$\leftarrow \mathcal{Loss}$

Backpropagate only through W_B and ϕ
