ELASTOMERIC COATING

MANUFACTURER

EVEREST & GAF

PRODUCTS

GAF HDZ WEATHER-WOOD
EVEREST EVERMETAL
COPPER METAL

SIZE

160 SQUARES SHINGLE
241 SQUARES COATING

PROBLEM

This property, located in Westlake, Texas, had significant hail damage to thirteen structures, including the home and all the outbuildings. The original roof replacement estimates the homeowner received from the initial adjuster of \$171,225 was far under the value needed to cover the project's scope effectively. Further discussion and demonstration were required to ensure the home and buildings could receive functional roof systems.

SOLUTION

To capture the total value replacement cost and to get the roofs back to their full aesthetic and functional quality, the Joe Hall Roofing team walked the property owner, their attorney, and on-site foreman through the steps necessary to maximize their claim. The claim settlement was achieved through direct contractor proof of the damage and precisely detailing the extensive scope required for restoring the property.

RESULTS

After an eight-week process, the property owner received the final award amount of **\$474,355**. The eight damaged structures' with shingles received new asphalt shingle roof systems, and the six metal buildings received the imperative restoration of the metal buildings have the owners' assets back in order and insurable.
